

Custom Biospecimens Collections

The Right Patient. The Right Sample. *The Right Strategy.*

Finding the right specimen can be the difference between success and program delay. Off-the-shelf biobank samples may not meet the nuanced needs of novel diagnostics, rare disease cohorts, or translational research. When your biospecimens needs include highly specific patient cohorts, fresh tissues, or customized processing, a custom, prospective collection can provide the critical samples that move your science from concept to breakthrough.

Precision's custom biospecimen collection services ensure that every sample is:

- Ethically sourced and IRB-approved
- Aligned with your protocol, demographics, and downstream requirements
- Managed by integrated clinical, lab, and regulatory teams

From feasibility assessment to specimen delivery, we help ensure the right samples and data are collected the right way—on time and on target.

The Precision for Medicine Biospecimens Advantage

- **Aligned, Patient-Specific Collection**
We work with you to build cohort definitions and collection plans based on your research needs—supporting assay and biomarker development, diagnostic validation, and more.
- **Faster Start with IRB Umbrella Protocols**
Get started without delay. Our IRB-ready framework and internal donor network allow us to initiate collections rapidly, reducing downtime and administrative burden.
- **Compliance-Driven, Ethically Grounded**
We collect with care. Every specimen adheres to global ethical standards and regulatory expectations—from patient consent to downstream use.
- **Real Clinical Oversight. Real Results.**
With board-certified pathologists and experienced clinicians involved in every project, we deliver more than just logistics—we deliver confidence.
- **Integrated Support from Collection to Analysis**
Our services are backed by lab and regulatory teams who ensure the samples collected today are usable, traceable, and impactful tomorrow.
- **Global Capabilities, U.S.-Centric Strength**
With a dedicated in-house donor site and access to an international site network, Precision for Medicine delivers custom collection services with agility, scalability, and scientific precision.

Collection Services Built for Your Research Needs

- **Matched tissue + blood** for oncology biomarker studies
- **Fresh samples** for immune profiling and monitoring
- **Rare cohorts** for diagnostic validation
- **Longitudinal samples** for ongoing translational or therapeutic response studies

Translational Research Services and Capabilities

A uniquely
comprehensive
resource of
biospecimens &
biomarker services
from the only CRO
purpose-built
for precision.

Therapeutic Breadth

- Oncology
- Cardiovascular
- CNS
- Dermatology
- Gastroenterology
- Immunology & Rheumatology
- Infectious
- Metabolic
- Ophthalmology
- Rare & Orphan
- Reproductive
- Respiratory

Delivering Value Throughout the Development Lifecycle
